

Data Fairness Reflection

1. Basis :

- 1.1. A neighborhood is considered under-represented if its number of library members or book checkouts is much lower than expected for its size, or if its participation rate is far behind other areas.

2. Finding :

- 2.1. Shubra is under-represented in overall numbers, with only 5 members (7.7%) and 34 checkouts (8.4%). However, its few members are the most active of all, averaging 6.8 checkouts per person—showing high interest despite low signup rates. Looking at it another way, checkout activity across all neighborhoods closely matches their member numbers (for example, Shubra has 7.7% of members and 8.4% of checkouts, while Zamalek has 16.9% of members and 16.8% of checkouts).

3. Plausible Reason :

- 3.1. The reading program's launch event and sign-up ads likely didn't reach Shubra well due to limited local promotion or longer transit distance compared to central areas like Maadi and Nasr City.

4. Next Step :

- 4.1. Team up with local schools and community centers in Shubra to hold sign-up events directly in the neighborhood and run targeted promos next summer.

	neighborhood	Unique Members	Total Checkouts	Avg Checkouts/Member	Member Share (%)	Checkout Share (%)
0	Heliopolis	13	87	6.69	20.0	21.5
1	Maadi	20	114	5.70	30.8	28.2
2	Nasr City	16	101	6.31	24.6	25.0
3	Shubra	5	34	6.80	7.7	8.4
4	Zamalek	11	68	6.18	16.9	16.8
